# A NEW and SUPERIOR SWEET POTATO

*Discovered and Produced Exclusively by*

*Leeland Farms*

**LEESBURG, GEORGIA**

## THE LEELAND BUNCH PORTO RICO VARIETY

To all of our customers and prospective customers:

When we started growing sweet potatoes several years ago we grew both the Bunch Porto Rico and the common running Porto Rico, and found that the Bunch more than doubled the yield of the running variety, in addition to having better quality and maturing earlier. We discarded the running variety entirely and have grown only the Bunch since that time. Practically all of our customers obtained similar results and are now growing only the Bunch.

As a result of our annual program of hill selection we now have an even better variety—still a strictly Bunch-type variety—with a beautiful golden flesh and a rich copper-colored skin. We found one hill of this new variety growing in our seed plot in the fall of 1950, and it looked so promising that we multiplied it as fast as we knew how. We have given this new variety the name of LEELAND BUNCH.

To get a comparison of the new LEELAND BUNCH variety with the regular Bunch variety we asked our customers who tried both varieties to report their findings. Over 75% found that the Leeland Bunch out-yielded the regular Bunch in U. S. #1 potatoes; about 95% reported that they preferred the Leeland Bunch for better eating quality. In addition to these customer reports the Georgia Experiment Station has determined by analyses that the carotene (Vitamin A) content is double that of the regular Bunch.

History has repeated itself and we have discarded a good variety of sweet potato in favor of a better one. We want to grow only the best for ourselves and we want to give the same opportunity to our customers.

We are offering certified seed potatoes and plants of our LEELAND BUNCH variety for sale to the general public for the first time. Our basic prices for the new variety are the same as last year's prices on the old Bunch variety. The small increase in prices on parcel post shipments is to take care of the increased postal rates which are now in effect.

We ship only healthy, mature, stocky plants and pack them with peat moss in specially designed and treated containers to insure their arrival in the best possible condition. We guarantee our plants to arrive in satisfactory condition and will make immediate replacement of plants or refund in the event of loss or damage in transit.

Because we have the exclusive source of supply of plants of the LEELAND BUNCH variety we advise you to place your order at an early date in order to insure delivery at the time you want them.

Our prices on seed potatoes and plants are enclosed, together with an order blank and return envelope.

We appreciate your business and will give your order our best attention.

# LEELAND BUNCH VARIETY SEED POTATO AND PLANT PRICES FOR 1954

SEED POTATOES: Our certified seed potatoes are good sound potatoes of medium size that should give the maximum of strong, healthy plants. Our prices are quoted F. O. B. Leesburg, Georgia, as follows:

1 — 9 Bushels	\$6.00 per bu.
10 or more bushels	\$5.75 per bu.

PLANTS: Prices on our certified plants are shown below. THESE ARE DELIVERED PRICES. WE PAY POSTAGE OR EXPRESS ON ALL PLANT ORDERS.

Quantity	DELIVERY DATES		
	March 15-April 30	May 1-May 31	June 1-July 15
100	\$ 1.60	\$ 1.45	\$ 1.30
200	2.60	2.25	2.00
500	4.95	4.25	3.75
1,000	8.95	6.95	5.95
5,000	43.00	33.00	28.00
10,000	85.00	65.00	55.00

For those who can pick up their plants at our farm, there is a reduction of seventy-five cents per thousand.

We ship only healthy, mature, stocky plants and pack them with peat moss in specially designed and treated containers to insure their arrival in the best possible condition. We guarantee our plants to arrive in satisfactory condition and will make immediate replacement of plants or refund in the event of loss or damage in transit.

In order to save our customers the cost of collection charges we do not ship C. O. D. You may send your remittance with your order or at any time prior to the date of shipment.

We make every possible effort to ship orders on the dates specified. We acknowledge orders immediately and notify our customers on the date their order is shipped.

## GENERAL INFORMATION

The recommended practices for growing the common running and Bunch varieties also apply to the LEELAND BUNCH variety. Select a well-drained sandy loam soil which has a clay or sandy-clay subsoil. Use 1000 to 1200 pounds of a fertilizer mixture high in potash and relatively low in nitrogen, such as a 3-9-9, or a 3-10-12. Avoid rich black soils, soils which have been manured, and soils on which legumes have recently been grown.

Best results are obtained when plants are planted 12 to 18 inches apart on ridges which are 6 to 8 inches high and 3½ feet apart. This method requires 10,000 to 12,000 plants per acre. In bedding potatoes for plants, one bushel should yield from 1800 to 2500 plants.
